Brain Pick

IT Staff Augmentation Vs
Managed Services

It is common knowledge that cloud adoption, when done right, increases collaboration, data availability, flexibility, and delivers greater business agility and cost savings to organizations. If your organization is looking at achieving these goals, then the Ecosmob AWS Partnership has you covered – end to end.

After joining forces with AWS in October 2021, Ecosmob has leveraged the tech expertise of the cloud giant to deliver out-of-the-box technology solutions that have made a phenomenal impact on our customer's tech prowess and business bottom lines.

Ecosmob has fostered a unique relationship with AWS, and our customers reside at the center of this partnership. Built on the combined pillars of innovation, talent, and deep, and shared technical experiences, **Ecosmob enables its customers to take seamless advantage of AWS's vast portfolio of innovative technology services.** This partnership is aligned with and aimed at growing our customer offerings.

So what exactly does the Ecosmob-AWS partnership bring to the table? It's a long laundry list of advantages. From delivering enterprise-grade tech solutions using AWS-based technologies to providing tools and solutions that enable excellence, we give our customers the flexibility and agility to thrive in their business area and grow from strength to strength.

Ecosmob pivots on a customer-first and a technology-first approach. And our partnership with AWS makes fast-paced and cutting-edge technology innovation a reality for our clients.

With the AWS partnership, we look forward to some innovative and tech-driven times ahead!

How to Choose the Best VoIP Solutions Provider in 2022?

VOIP Solutions Provider Companies have witnessed a huge communication shift as they made a transition from traditional phone systems using CDMA and GSM technology and turned to internet-enabled VoIP technology, to avail the diverse features of this powerful business phone system.

VoIP is creating waves across the telecommunication sector, with the global VoIP service market projected to reach \$95 billion by 2027 [Read more](#)

Why VoIP Open-Source Platforms are still in Demand

Open source VoIP is taking the telephony world by storm, with much of the tech arena adopting open-source solutions with open arms.

Today, VoIP business solutions use several open-source libraries and technologies. And VoIP development services are finding that telephony apps built using open-source platforms have transformed the way phone systems work. Apart from reducing costs, open-source VoIP software brings flexibility, better [Read more](#)

AI is starting to play an instrumental role in preventing VoIP fraud

AI is emerging as a game-changing technology in the world of VoIP. Now it is being used to detect inauthenticity in a person's voice and use biometric markers to prevent fraud. Anti-fraud voice measures using a dataset of known fraudulent voices as part of a wider fraud detection system. With fraud prevention on the radar of most modern enterprises, anti-fraud AI technologies are becoming more accessible to smaller businesses, especially as popular cloud-based VoIP tools connect with larger AI players. As VoIP security hacks become the new focus for businesses, we can expect more VoIP services to introduce powerful multi-layered security in the near future.

Tracking customer conversations and gaining insights from mobile VoIP applications

A growing number of VoIP providers now offer mobile applications for smartphones, along with desktop/softphone applications. This has made it easier for users to connect to their company's VoIP network while working remotely, or travelling. However, mobile VoIP applications still don't have the tools – like call recording, CRM integrations, and caller ID - that are needed to track conversations with customers. But that's set to change, as new tools are being rolled out that empower enterprises to gain insights into how their employees interact with customers via mobile devices.

What our Customer say?

Their team is humble and has the right service qualities, which makes a difference.

Shivendra Gupta,
Founder, Desiwalks Tours
Private Limited (HopOn India)

It's frequently very difficult to manage projects with outsourced teams in different countries and time zones. Ecosmob took the pain out of this process and they were very professional and organised in their approach to all aspects of the engagement.

Wayne Powell,
Logimeter

IT Staff Augmentation Vs Managed Services: Which one is for you?

IT has been a frontrunner and the biggest beneficiary of the outsourcing model. The two most popular solutions—staff augmentation services and managed services are commonly used to overcome IT talent shortages. IT staff augmentation services, though not new, is witnessing rapid growth today. At USD 66.5 billion in value, the demand for knowledgeable and experienced IT staff is growing rapidly.

The question that confronts most leaders is which model of outsourcing will work better for the business. Will employing IT staff augmentation or managed services provide a strategic advantage? There are no straightforward answers. It's better to understand how each works and arrive at an informed decision.

Want to know which outsourcing models will work best for you? [Learn more here](#)

Ecosmob Technologies heralds a new age of communication. We build smart IT solutions that are high-end and help businesses grow their customer base. Our machine learning solutions empower AI to mimic the way your customers interact with your business.

VoIP, of course, is our forte.
